

Abstract of the Disclosure

5 A system provides access by healthcare payer organization personnel to information
maintained by a healthcare provider organization. An acquisition processor acquires and
collates information from one or more healthcare provider organization information systems
including: patient medical eligibility determination related information; patient admission,
discharge, and transfer related information; and patient clinical information. An
10 authentication processor verifies that a healthcare payer organization user is authorized to
access the acquired collated patient information in response to user entered identification data.
A user interface generator provides data representing a display image including elements of
the acquired and collated information to an authorized user in response to user command.
